THE EVOLUTION OF EDUCATION “ FROM THE CLASSROOM TO THE DIGITAL WORLD ”

Due to Covid there has been a huge evolution in education sector has just took round turn from the classroom to the digital world.

The E-learning program is one of the fastest-growing learning platforms. They are all online platform where number of students join and study over there. Soon this will be

the fastest-growing online network for the future of education.

The concept of traditional education has changed drastically due to pandemic and took a turn towards online education and drastically changing the needs of the people as it is more comfortable and held to be easier for students as well as teachers. Being physically present in a classroom isn't necessary anymore with the rise of the internet

and new technologies; you can have access to a quality education whenever and wherever you want, as long as you have access to a computer, mobiles, laptop or any such gadget. We are now entering a new era — the revolution of online education. It's really hard to understand the notion of leaving behind the conventional classroom, especially if it's to face this vast space called The Internet.

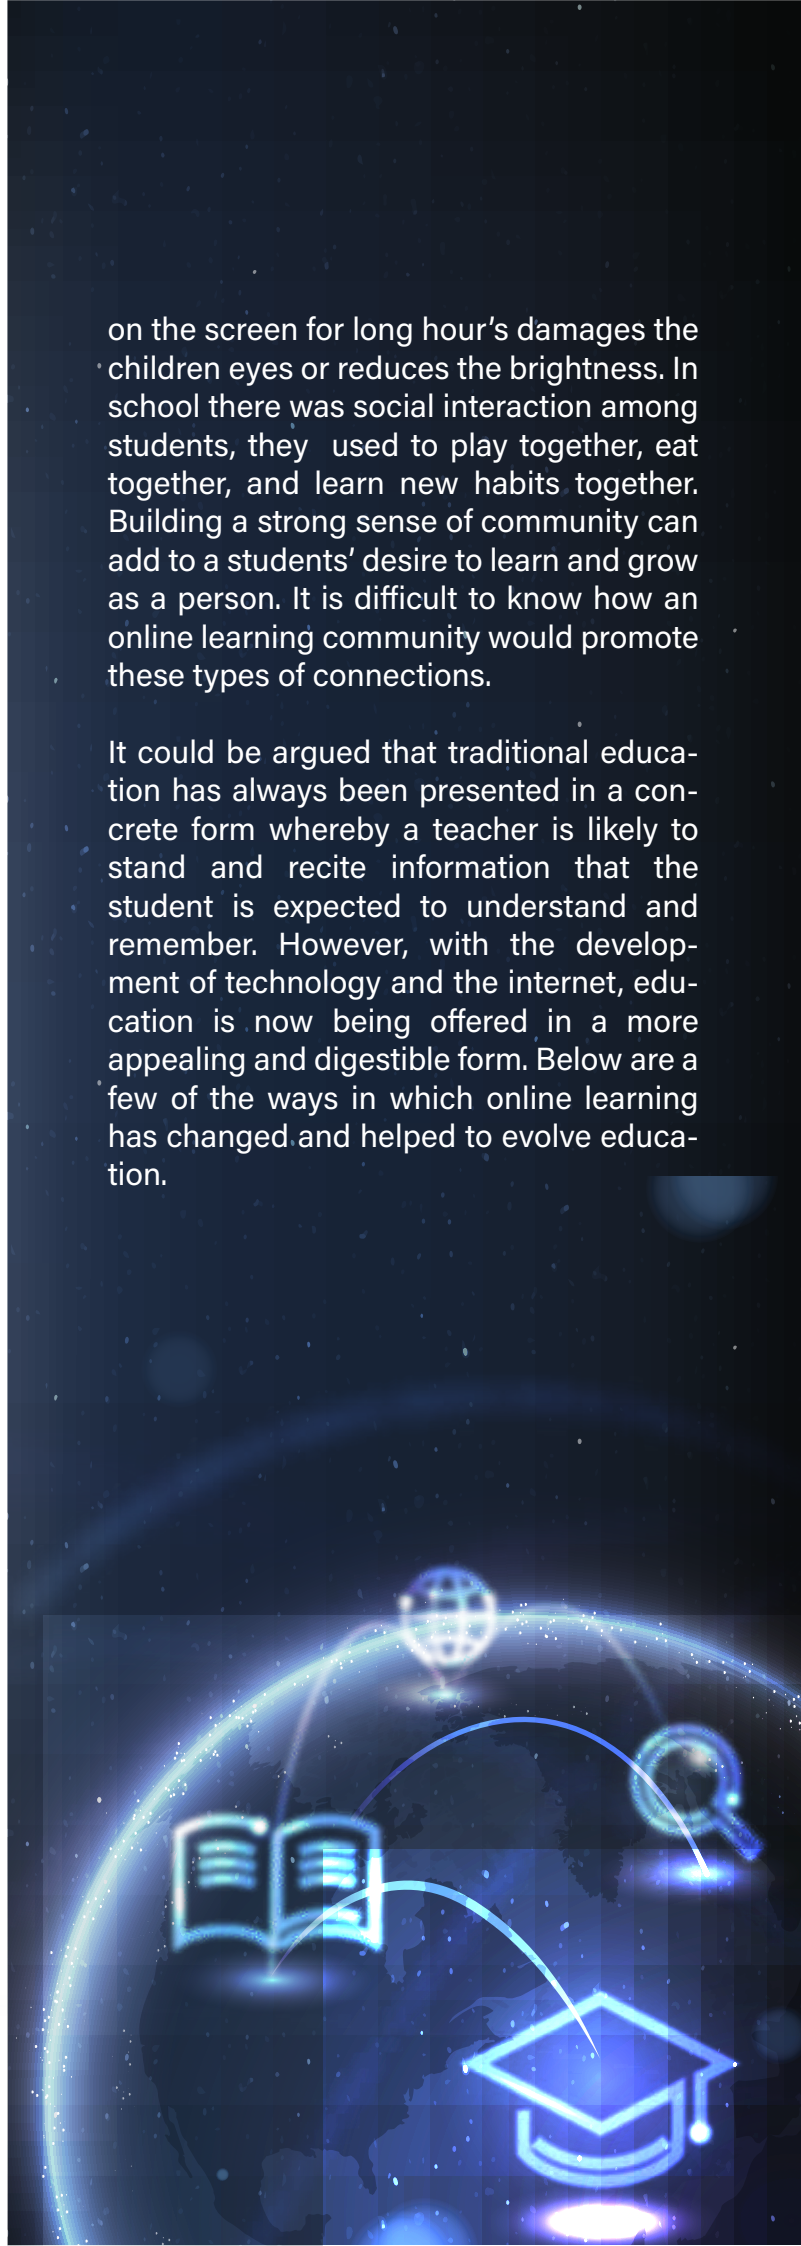

We all want to spend money in its best place which is profitable for us ELearning is one of the best source to invest your money when we can get quality education on our doorsteps, then why one will prefer an offline course.

In an offline class generally there are more students whereas most of the online classes are given alone. Depending on the course, teachers are available for each student on their time and this also helps them to interact directly with the teacher. Solo classes are also good because a teacher can easily focus on a child.

As like any other technology everything has its own pros and cons as like online education is beneficial for some people at the same time it has its own consequences. Some students need to be shown exactly how to do something via demonstration physically which may be challenging through a screen in some cases. Being

on the screen for long hour's damages the children eyes or reduces the brightness. In school there was social interaction among students, they used to play together, eat together, and learn new habits together. Building a strong sense of community can add to a students' desire to learn and grow as a person. It is difficult to know how an online learning community would promote these types of connections.

It could be argued that traditional education has always been presented in a concrete form whereby a teacher is likely to stand and recite information that the student is expected to understand and remember. However, with the development of technology and the internet, education is now being offered in a more appealing and digestible form. Below are a few of the ways in which online learning has changed and helped to evolve education.

Some students don't have the access to computer, laptop, mobile phones or Wi-Fi at their place and finds ELearning costly. The E-Learning methods currently practiced in education tend to make participating students undergo remoteness and lack of interaction. As a result, many of the students and teachers who inevitably spend much of their time online can start experiencing signs of social isolation, due to the lack of human communication in their lives. Social isolation coupled with a lack of communication often leads to several mental health issues such as heightened stress, anxiety, and negative thoughts.

One of the biggest drawbacks of ELearning is that students can cheat easily. Students cannot be directly observed while giving their assessments online as compared to in school learning. Sometimes without a proper identity verification system in place, students taking online assessments might be able to let a third party take the assessment instead of

themselves, resulting in a wholly fraudulent test result. In particular, this is due to limited access to high-speed internet, smart devices, and even electricity.

This hampers educational institutions' ability to deliver at-home online learning to students at a time when in-classroom teaching isn't an option due to social distancing and lockdown measures. With the e-learning market continuing to grow in worth, things such as virtual technologies and mobile learning are gaining precedence and will vastly be incorporated into traditional education. As institutions are already utilising virtual platforms and finding them to be a more cost-effective route, it is evident that education will quickly become digitalised. Through changing the way that people are gaining an education, it not only ensures that everyone has access to education but also impacts the economy whereby people will continue to self-develop and therefore gain more skills.

So it is necessary to see that is online education will be used completely in future! Or else after the pandemic gets over things will be back to normal in school. While this could change in the future, we are currently not to point where we can fully teach all professions solely through E-Learning.

student on their time and this also helps them to interact directly with the teacher. Solo classes are also good because a teacher can easily focus on a child.

As like any other technology everything has its own pros and cons as like online education is beneficial for some people at the same time it has its own consequences. Some students need to be shown exactly how to do something via demonstration physically which may be challenging through a screen in some cases. Being on the screen for long hours damages the children eyes or reduces the brightness. In school there was social interaction among students, they used to play together, eat together, learn new habits together. Building a strong sense of community can add to a students' desire to learn and grow as a person. It is difficult to know how an online learning community would promote these types of connections.

numerous activities, accomplishments, and competitions it holds and organizes. These opportunities allow everyone to develop as a person and flourish in ways that would otherwise be unthinkable. On stage, most of the quiet and timid acolytes shine.

Emphasis on interactive and experiential learning opportunities by bringing in real-world examples in the form of live projects, consulting, research, and Industry-Academia interaction has let Axis Colleges acclaim various awards like "Best Institute with Excellence in Enabling Research Environment" by ASSOCHAM, "Best Fashion Designing Institute of the Year" by National Education Brilliance, "Best Institute for Enabling R&D Environment in Renewable Energy" by Solar Energy Society Of India, "Best Emerging Institute" by CAREERS 360, Axis Institute of Architecture has acquired "4th position in India" as per India Today's ranking, and has also gained "1st position in Kanpur for the Best Private Institution of engineering". In addition to this, Axis Colleges is also endowed with the 13th position in India as the most beautiful campus. Driven by inspiration to do things differently, he

believes in offering his Axians Skill-based training to its students, which is required to solve the existing problem, and make the system more relevant leading to holistic development and make them Industry-ready.

At Axis, we value a hands-on learning environment. Our students blend analytical rigor with curiosity, fun inventiveness, and a zest for solving the most difficult challenges in service to society in 15 departments across multiple disciplines under the aegis of Axis.

For 2021, Faculty and Students worked on Hybrid Treadmill Scooter and Water Purification System (Design Patents Granted). This Challenge forced the student to think differently and be more.

Our team of Academicians endeavouring hard with innovative yet viable elucidations, exploring and identifying the talent of each individual rather than comparison. Unique infrastructures, learning beyond syllabus, student development program, are amongst the few development gratifying the Vision of Mr. Kushwaha to "Let's Educate the World".

NIED EDUCATION COUNCIL : Empowering Lives Through Education

Dr. DHANRAJ

(Director General and Chief Executive Officer)

Education is beneficial when any course is done by the recognized institution/ organization. NIED EDUCATION COUNCIL is the educational development organization of combining excellence with innovation, places a high value on providing its students with a fulfilling educational experience in their chosen career or discipline. It is the Leading group of Institutions working globally with the aim to develop knowledge and Skills of each and every person, and always willing to invent, innovate and renovate itself with the changing times. In continuation of its education service to the nation, NextGen India Educational Development has become a pioneer in providing the best education & training in collaboration with state and National Government or International. Our prime goal of providing quality education to our students and the meeting the need for skilled professionals in the country and out of India. The academic rigor propels them to acquire greater professional com-

petence. They have also been exposed to training and real world projects.

Above all, it's our belief in possibility and our unshakable optimism. It's a connection to others near and far. It's a hunger that pushes us to tackle challenges and pursue progress. It's the conviction that together we can create a world of good. Join us on the journey and fulfill our aim and goal. My aim to educate every youth of my country with a high profile identity from every city, town, village of India. I am sure that our student will find a pathway to a bright future to a chosen career or any profession they also can get enough knowledge to face any demand and challenges that an employer may have on them. I wish for their great success and bright future and hope for their better tomorrow.

"The motive behind incorporating this organization is not to make profit but to serve the society."

It is said that - "When we wake up in the morning we have their two simple choices.... Go back to sleep and dream or chase that dreams.... Choice is yours."

We will be a leader in the integration of teaching and learning, advancement of the knowledge base through research, and leadership in service and outreach. Further, we will be a leader in preparing professionals who provide leadership and exemplary educational and related services to improve the lives of individuals in a changing and complex global society.

I Dr. DHANRAJ, started my life started Life from small village of tribal community and facing to many challenge during education due to community thinking and financial problems. The major problems I faced as school education was not good because in village and around 10kms area there was

no high school and his all primary classmates left the education and started working as labour in farms but he continue with education as pedestrian to go school and in the way cross two rivers by swim with books. After completing high school work hard in farms to earn some money to purchase study material for poor students because their parents was not able afford school fees and material expenses for those students. And decided to educate every citizen of the nation especially underprivileged section of the society and now the journey of 10 Years I am active in this sector socially and educating people with the vision of empowerment of the Nation and worldwide. I have launched the organization in 2012 Nationally and also started working with various departments and NGO's My inspiration is my parents they always give me time positive energy to do something different that can provide me challenging and winning platform and also I have read 3400+ books of Dr. APJ Abdul Kalam, Dr. Bhimrao Ambedkar, Swami Vivekananda, Gauttam Buddha the all inspired me to be helping for society. As I am the part of tribal community and saw very closed the struggle and life style of slums, illiteracy, uneducated and unemployed people, they always fighting with life to live and I want to be a part of inspiration/ example for those people for rise a lamplight in their life, So that faced problems and challenges at every step to educate and serve people because. Every problem and challenge teaches me to do different and stronger planning before started every task. As every business required we always need the useful things and essentials like a good and hardwork

ing team, funds as needed, And also in this work experienced faculty and trainer, good and repetitive platforms, organizations and companies tie-ups to provide good employment after complete the training to students, that is much difficult to find in present time.

I think that people they working to serve the society and educate people are always with better opportunity to presence as mentor of the society and self-development. It's also the source to flow positive energy in every section of society to working for humanities and social awareness by the education and development profession. I also analyze many more opportunities in social and education sector always with me.

A system that is made by me in this sector is always makes me and this service unique, I always work in my discipline and searching works something challenging after scrutiny of any project I have good communication skills to present it in front of people.

I learned from the entrepreneurship that nothing is impossible in this universe but we have to find the problem issue and think about how can be solved and what plan we have for that and dream the pro-

fession/ occupation that make it easier, with a stronger plan it can be achieved as we wish.

I want to share my own experience to all starting up or budding/aspiring entrepreneurs that they should have to follow these as well as I always remember it.

When you Opening your own business is often a learn-as-you-go process. But, the more smart decisions you make early on, the better chance your company has for success. If you have an entrepreneurial idea, try these.

1. Address excuses
2. Absorb everything
3. Be a solution
4. Keep it simple
5. Count the costs
6. Imagine yourself with zero money
7. Earn while you build
8. Speak up about your business
9. Know the legal requirements for starting a business
10. Balance passion with wisdom

After the startup you should have to work hard, make punctual systems, disciplined management, strategy to evaluation and achievement, powerful plantings, cost effectiveness, efficiency, positive energy, study about the work and processes to do it.

JAIPUR | 20 MARCH 2021

Thank You
